

R&D SERVICES

Agile. Scalable. Reliable.

Take your secure mobile communications project to the next level with Secure Group's professional software and hardware R&D services. Our team can help you every step of the way, from technology consulting and solution architecture, through design and prototyping, to full-scale product production.

End-to-end project management

Over the past decade, Secure Group has developed multiple products for secure mobile communication, delivering innovation with each iteration. This track record of successful projects translates to our comprehensive understanding of industry-specific requirements and processes involved in developing and launching a new product on the market. Leave the development and project management to us and focus your resources on your core business.

Quick time-to market

We understand that in today's competitive environment, time to market is a critical success factor for many projects. The unique combination of our existing software technology stack, hardware platforms, and R&D services means that you can get a working prototype as fast as 60 days from starting the project.

Resources fit for purpose

Secure Group's R&D team has experience ranging from working on small scale proof-of-concept projects to full-blown product design and production. Our resources are not just limited to our engineering team but also include ISO 9001 certified assembly and quality control facilities. Best of all, Secure Group's engineering and production resources are incredibly flexible and can be scaled at will to meet the most demanding project requirements.

About Secure Group

We add value to your project.

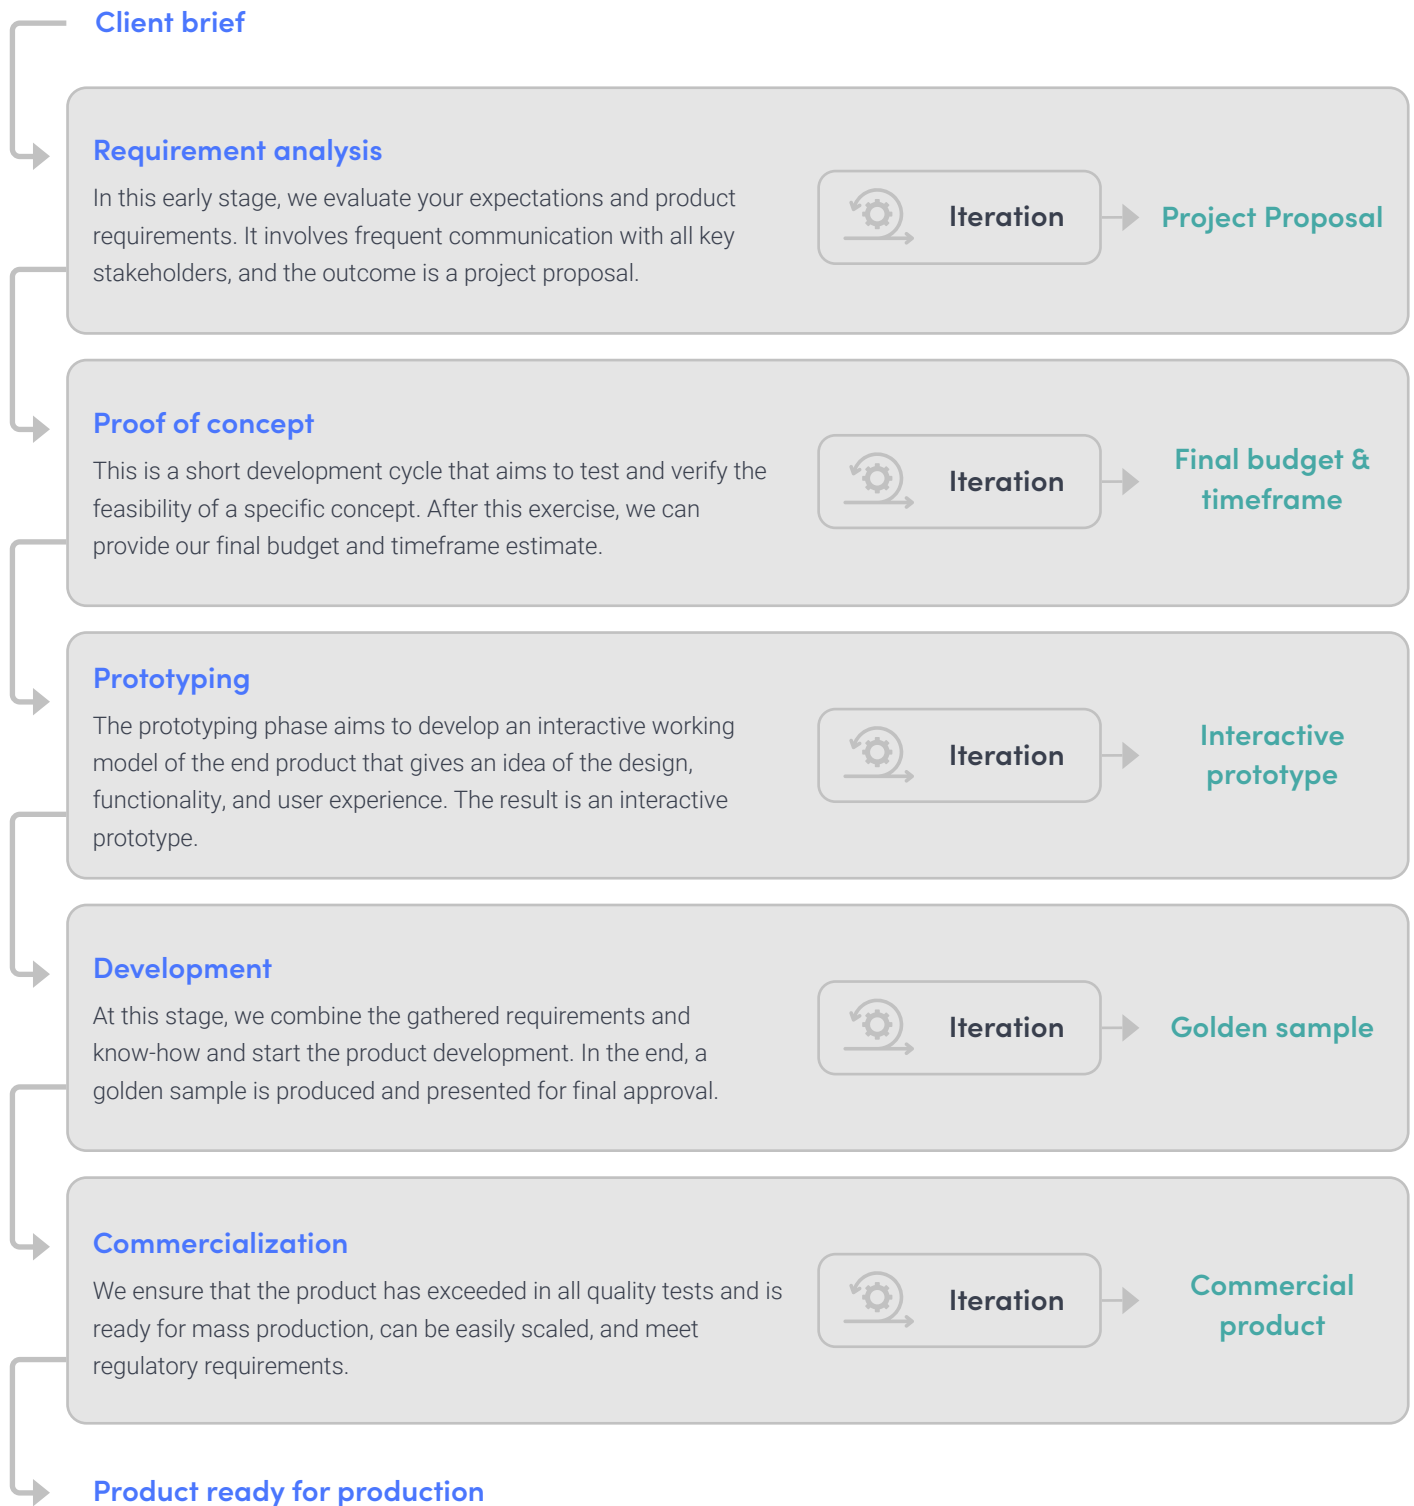

Secure Group is an established cybersecurity solution provider with a proven track record of innovation in the field of wireless cellular mobile communications. For over a decade, we've been the trusted partner of SMEs, government agencies, and institutional clients, who rely on our technology for securing their mission-critical communications.

- Over ten years of innovation in the field of secure mobile communication
- 50+ full-time team members with 60% dedicated engineers
- R&D hub located in Sofia, Bulgaria, often referred to as the Silicon Valley of Europe
- Both hardware and software R&D capabilities
- Flexible and efficient R&D framework designed to deliver

A Framework Designed to Deliver

Our R&D framework is battle-tested and designed to deliver no matter the complexity of the project. At its core, it allows for agility and flexibility, breaking down each major stage of the R&D process into short iterations with predefined deliverables.

Manufacturing Facilities

Our assembly plants in Shenzhen, China, and Sofia, Bulgaria, are ready to ramp up production. Both facilities are ISO 9001 certified, follow strict access and quality control processes and have a capacity of up to 30,000 devices per month. Alternatively, we can provide knock-down (KD) or semi-knocked-down (SKD) kits and help you set up an assembly line in a location of your choosing.

Project Showcase

Project name: R1

Year: 2020

Client: Undisclosed government agency

Brief: Interoperable flagship device with powerful performance-oriented specifications, modern rugged design, and additional hardware security features.

Modern design

Water, dust & drop resistant

Dedicated SOS button

Three-stage mode switch
